chains, each on the same states, with $n \geq 2$. Each observation is a series of states, and is generated as follows: a Markov chain and starting state are selected from a distribution S , and then the selected Markov chain is followed for some number of steps. The goal is to recover the transition matrices of the Markov chains from the

Dec 19, 2015 · Food Chains A food chain is a series of steps in which organisms transfer energy by eating and being eaten. Consumers are organisms that cannot harness energy directly from the physical environment. Consumers • Herbivores eat only plants • Carnivores eat only animals • Omnivores eat plants and animals • Insectivores eat only insects

Food Chains and Food Webs - US EPA

Food chains show the relationships between producers, consumers, and decomposers, showing who eats whom with arrows. The arrows show the movement of energy through the food chain. For example, in the food chain shown below, the small fish (silverside) gets its energy by eating the plankton and the large fish (bluefish) gets its energy by

Critical length of force chains and shear band thickness ...

$50 = 10$ for a coarse-grained sand and 14 for a fine-grained sand. Similar findings about the variation of the t_s/d ratio with the mean particle size can be found in [47]. The shear band thickness in drained tests also depends on the initial density and stress level. Desrues and Viggiani [17] and Pradhan [47] observed that for a given sand
