#### **AN441 Application note - STMicroelectronics**

As the inrush current is not only due to the behavior of the inductive part of the load, the problem cannot be resolved just by triggering the Triac at peak voltage for the 1st half-cycle and then control it in full wave-mode The solution consists of implementing a soft start by progressively increasing the conduction angle of the AC switch

#### **Tips for Reducing Forming Fabric Drive Load**

- Drive load levels indicated there was a 9% decrease in the wire turning roll drive load This was equivalent to 90 HP on two motors for a total 180 HP drive load reduction This produced \$70,384 in electric savings
- The reduced drag load that minimized the excessive fabric wear improved forming fabric life from an average of 60
