How Terminal Is Terminal Velocity?

velocity 145 m/s, which is 45% of her terminal velocity If the woman fell in a perfect vacuum (with no air resistance), her velocity would be given simply by $v = gt$, and her distance traveled would be $s = (1/2) gt^2$ According to these formula, she would hit the ground in 156 seconds with impact velocity 1534 m/s We see that the air

1. D. equal to the weight of the raindrop. (1)

1 A raindrop falling through air reaches a terminal velocity before hitting the ground At terminal velocity, the frictional force on the raindrop is A zero B less than the weight of the raindrop C greater than the weight of the raindrop D equal to the weight of the raindrop (1) 2

The NET Force Example: Net force = 0

A skydiver has two forces - gravity (his weight) and air resistance When they balance, he coasts down with constant speed • Zero net force does not necessarily imply zero velocity (a skydiver's terminal speed will be greater than 100 mph) • Zero force constant velocity, $v = 0$ is a special case of constant velocity
